Software Engineer | 3 Years Experience | San Jose, California | (206)-601-6528 | shubhi2818@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

WORK EXPERIENCE

JerseySTEM | Software Developer | Seattle, United States

Feb 2024 - Jan 2025

- Developed a React dashboard with TypeScript to centralize volunteer and sponsor data, managing 5,000+ profiles with real-time search and filtering, reducing search and profile access time by 85% and streamlining outreach workflows.
- Built a RESTful API using Java (Spring Boot), integrating with a MySQL database populated by RPA bots to enable real-time, automated data retrieval and seamless dashboard interaction.
- Developed and deployed Automation Anywhere bots to extract data from LinkedIn, Handshake, and iCIMS, reducing manual effort by 80% and feeding the centralized recruitment dashboard.
- Created and launched a Chrome Extension using JavaScript and OAuth 2.0, automating bookmark management for 200+ employees and integrating with Google Sheets API for efficient data handling via Google Cloud Platform.

Tata Consultancy Services | Software Engineer | Mumbai, India

Aug 2020 - Jun 2022

- Engineered scalable, distributed password management features for a 500k-employee internal portal using Java and Spring Framework, improving security and user experience, resulting in a 40% reduction in support tickets.
- Developed RESTful APIs and microservices using Spring Boot, Spring MVC, and Redis for passwordless authentication, reducing reset requests by 27% with secure TOTP validation.
- Achieved 95% test automation and code coverage through Test-Driven Development (TDD), implementing standardized QA procedures with JUnit and Mockito. Ensured well-tested, maintainable code, supporting CI/CD best practices.
- Developed error, latency and failure metrics for critical services, reducing operational debugging time by approximately 60%.
- Drove the adoption of a Jenkins-based CI/CD pipeline, integrating automated code reviews with SonarQube and Git for version control, streamlining workflows and reducing deployment time.
- Migrated 50+ applications (all environments-DEV/PROD, present on-premise or cloud) from legacy web servers to Single Sign-On (SSO) access gateways (Siteminder), ensuring seamless integration within a distributed architecture.
- Mentored and led a 6-member Scrum team of junior developers, implementing agile methodologies and providing daily task training and troubleshooting. Achieved a 40% increase in sprint completion rate within an agile environment.

EDUCATION

University at Buffalo, The State University of New York

Master of Science, Computer Science

Buffalo, New York

Aug 2022 - Jan 2024

SRM Institute of Science and Technology

Bachelor of Technology, Information Technology

Chennai, India

Jul 2016 - May 2020

PROJECTS

Consentize Event Platform | Angular, C#, MySQL, Docker, AWS, Git

Jan 2023 - May 2023

- Built and delivered an exclusive event management portal for Consentize Inc., employing Angular for the frontend and C# for backend APIs. Leveraged Docker containerization and deployment on AWS EC2 for scaling and management.
- Utilized AWS S3 for media storage to support data capture and performance, and ensured smooth database operations with RDS MySQL.

FDA Approved Restaurants Recommender Application | PostgreSQL, Angular, Node.js

Sep 2022 - Dec 2022

- Managed PostgreSQL database for an FDA-approved restaurant recommendation system with Angular and Node.js UI. Designed schema with relationships, keys, constraints, and implemented triggers for efficient data management.
- Optimized slow SQL queries, reducing execution time from seconds to milliseconds using indexes, resulting in a 20% faster data retrieval.

MapReduce for Inverted Index Processing | Golang, Distributed Systems, RPCs

Sep 2022 - Dec 2022

- Implemented Go-based MapReduce solution for inverted index processing with custom Map and Reduce functions, Goroutines, channels, and RPCs for fault-tolerant inter-worker communication, optimizing processing time.

TECHNICAL SKILLS

Language and Frameworks: Java, Spring Boot, C#, Go, Python, SQL, Shell Script, Hibernate, .Net Core

Web Development: React.js, AngularJS, Node.js, HTML, CSS, JavaScript, jQuery, JSP, Java Servlets, JSON RESTful API, XML

Database: PostgreSQL, MySQL, Microsoft SQL Server, MongoDB, Redis, Relational Databases (RDBMS) , NoSQL

Cloud Platforms: AWS (EC2, S3, RDS, ECR), Google Cloud Platform

Design and Architecture: Algorithms, Design Patterns, Object-Oriented Design (OOD), Microservices, RPCs, SOLID Principles

Testing, Monitoring & Logging: JUnit, Mockito, Postman, SonarQube
